Uses & Benefits

SeaDek® Quality and Innovation

SeaDek non-skid, closed cell EVA material offers a safe and comfortable alternative to molded in non-skid, paint-on textures and other marine traction products currently available. Made in the USA from UV protected non-absorbent foam, SeaDek features an innovative, textured micro-dot surface or brushed faux teak for added non-slip characteristics.

Formulated with an acrylic based high-bond pressure sensitive adhesive, SeaDek's robust, 3M™ peel-and-stick application makes it easy to install and requires no mounting hardware. SeaDek is easy to clean, highly stain resistant and provides protection for boat surfaces, especially in high traffic areas. Other benefits that SeaDek offers include:

- Exceptional traction even when wet
- Unparalleled comfort when standing, walking or leaning on boat surfaces
- Shock absorption which decreases fatigue
- Protection for boat surfaces against scratches, chips and dents
- Noise reduction characteristics – ideal for fishermen

SeaDek can be tailored to fit nearly any application on any type of boat, including: sports/commercial fishing, flats boats, sailboats, ski boats, commercial marine, house boats, personal water craft, kayaks, stand up paddleboards, etc. The unlimited applications for SeaDek include:

- Swim platforms and cockpit pads
- Stand Up Paddleboard Pads
- Step kits
- Helm station anti-fatigue pads
- Poling platforms
- Coaming bolsters/pads
- Foot-wells
- Trailers
- Cooler tops

Easy to install and customizable, SeaDek is available in a variety of sizes, thicknesses, textures and colors. SeaDek replaces the need for molded-in non-skid, helping OEMs save time and money in the manufacturing process. SeaDek's capabilities include:

- CAD for precision manufacturing requirements
- Customized bevels, contours, logos or designs
- Multi-color laminations
- Marketing and co-branding support

Just peel and stick!

Swim Platform, Helm & Bolster Pads

Comfort and durability with a finished look and feel are all characteristics of SeaDek's **Swim Platform and Cockpit Traction Pads**. Say good bye to smelly boat carpeting and hard rubber mats. Since SeaDek is a closed-cell material it will not absorb water that leads to unpleasant odors. SeaDek is far superior to other traction alternatives on the market which may look like SeaDek, but are not made from high quality EVA materials.

Each pad starts with soft yet durable 3mm EVA material on the bottom for comfort and shock absorption. A thermo-embossed or brushed faux teak, 3mm layer is then added to the top for durability and superior non-skid performance in both wet and dry conditions. Next, the easy to apply PSA (Pressure Sensitive Adhesive) backing is added to the pad. Finally our CNC machines route a finished bevel along the outer edge of the pad to prevent lifting or peeling. Additionally a logo or design can be routed into the pad for a custom look.

Malibu, Sea Ray, Moomba, Supra, Yamaha, Chaparral, Tige and Monterey are just a few of the platform pads currently available from our catalog and our selection is growing daily. If you don't see your specific boat and platform pattern don't worry, we will work with you to easily create a custom pad for your application.

SeaDek manufactures the highest quality **Helm Station Pads** on the market today. Available in a variety of sizes and styles they feature ultra-thick, durable, dual density foam that helps absorb impacts while reducing fatigue caused by prolonged standing at the helm. Installation is a breeze and can be completed in minutes. Like all of our products, these pads are specifically formulated for the marine environment so they do not absorb water and are highly stain resistant.

SeaDek's **Coaming Bolster Pads** are designed for comfort, durability and a quick and easy installation. Far superior to traditional vinyl coaming pads, SeaDek pads will not tear or absorb water. No snaps, screws or mounting hardware required, simply peel off the backing and apply. SeaDek's innovative surface textures provide non-slip traction, helping users stay put in even the most challenging conditions.

SeaDek's Coaming Bolster Pads provide:

- Simple and robust peel-and-stick installation
- 20mm thick protection for your boat's surfaces
- Easy to clean and highly stain resistant
- Flexible foam forms perfectly to coaming walls

SeaDek is **Made in the U.S.A.**
